

## // LIMPAR COMPACT //

### DETAILS

- Working width 120 cm
- Fast attachment and removal
- Large brush diameter - 330mm
- Can be pivoted by the operator
- Short front-end projection – high maneuverability
- Central brush height adjustment
- Fast and easy installation
- Switch-on/switch-off from the driver seat

### SNOW BLADES

With the snow blade Compact, you extend your lawn tractor to a clearing vehicle for snow removal or other application possibilities. Thanks to the quick-change system, it only takes you two steps to couple or uncouple the snow blade.

The snow blade's safety system protects the operator and the lawn tractor from damage.

For example, if the snow blade encounters an obstruction in operation (manhole cover) the blade folds automatically and yields to the obstruction.

Naturally, a rubber scraper bar and rail are included in the scope of delivery.

Extend the application possibilities of your lawn tractor with different attachments for the all-season machine. Combined with our toolless quick-change system, convert your lawn tractor into a sweeping machine with minimal effort.

All operating elements can be easily reached from the driver seat. Brush drive switches on automatically when lowering the attachment sweeping machine. The toolless quick-change system is partially integrated in the attachment frame. Thus projections in front of the lawn tractor are avoided and the attachment frame protects the front of the tractor against damage. Thanks to the toolless quick-change system the attachments can be coupled or uncoupled with minimal effort.
