

## //LIMPAR HG55 & HG65//

### DETAILS

- 55 or 65cm working width
- 5 forward / 1 reverse gear (HG55)  
or hydrostatic transmission (HG65)
- Differential lock
- Mulching function
- Handlebar with height and side adjustment
- Stepless cut height adjustment 50-100 mm

The new Limpar brush cutters convince with their powerful engines when used in rough terrain, at high meadow grass and scrub.

For optimal driving these machines have an infinitely-adjustable hydrostatic transmission, which ensures the adjustment of the desired speed due to a rotary switch, or a manual transmission which is equipped with 5 forward and 1 reverse gear. Both drives are supported by a selectable differential lock and a lockable support wheel.

The handlebar damper reduces the operator's hand-arm vibrations, which makes the machine very comfortable, in conjunction with the three-stage handlebar height and side adjustment. In use, the robust main knife cuts the grass before it is crushed by the mulching knife.
